Education

- B.C.A (Bachelor of Computer Applications) from KVN Naik College, Nashik
- H.S.C from KVN Naik College, Nashik
- S.S.C. from Guru Gobind Singh Public School, Nashik

Soft Skills

- Communication
- Problem-Solving
- Time Management
- Presentation Skills
- Team work

Certification

- AWS Certified Solutions Architect (Associate)
- RED HAT Certified System Administrator (RHCSA)
- Azure Fundamentals (AZ-900)
- Google IT Support Professional Certificate (COURSERA)
- Cpanel Professional
- Oracle Cloud Infrastructure Architecture Associate
- Docker Foundation Professional

Summary

Security and infrastructure professional with 5+ years of experience across system administration, cloud operations, enterprise technical support, and SIEM technologies. Currently working with IBM as a QRadar Support and Threat Management Engineer, providing enterprise-level support for IBM QRadar SIEM environments, log source integrations, event collection, EPS tuning, offense investigation, WinCollect troubleshooting, parsing and DSM issues, HA deployments, Event Collectors, Event Processors, and QRadar performance optimization.

Strong background in Linux and Windows server administration, virtualization, cloud infrastructure (AWS/Azure), troubleshooting complex incidents, and customer-facing support operations. Experienced in handling production-critical environments, security monitoring workflows, log management, escalation handling, root cause analysis, and collaborating with SOC teams, network teams, and third-party vendors to resolve security platform issues within SLA timelines

Technical Skills

Operating Systems & Remote Management:

- Expert-level experience with Windows Server (2003, 2008, 2012, 2016, 2019) and Linux distributions (RedHat, CentOS, Ubuntu).
- Proficient in remote deployment, installation, and management of servers using IPMI, iDRAC, and iLO technologies.
- Executed routine system patching, disk management, and system health checks in both physical and virtualized environments.

Hosting Panels & Web Server Management:

- Proficient in managing hosting environments using Plesk and cPanel/WHM.
- Skilled in Apache configuration, SSL implementation, virtual host setup, and optimization for high traffic websites

Monitoring, Backup, and Incident Response:

- Extensive experience in real-time monitoring and incident management using Nagios, Zabbix, AWS CloudWatch, and Datadog.
- Configured and managed RSoft Backup Manager for automated backup schedules and bare-metal restoration.
- Proactive in identifying performance bottlenecks, system failures, and initiating failover procedures.

Virtualization & Infrastructure:

- In-depth knowledge of virtualization platforms including VMware, Hyper-V, XEN, vSphere, and OnApp.
- Configured and maintained virtual machines, snapshots, templates, and resource pools for scalability and HA.

Networking, FTP, and Mail Servers:

- Solid understanding of network protocols, firewalls, routing, and VPN setup.
- Experience configuring and managing FTP services via FileZilla and native OS tools.
- Proficient with QMAIL, EXIM, POSTFIX, and MailEnable for mail server configuration, queue management, spam mitigation, and troubleshooting delivery issues.

Database Administration:

- Experience with MySQL and MSSQL database server installation, tuning, migrations, and scheduled backups.
- Skilled in performance optimization and resolving query bottlenecks in production environments.

Security Information and Event Management (SIEM):

- Skilled in QRadar Event Collector, Event Processor, offense management, rule tuning, and dashboard/report administration.

Cloud Platforms & Infrastructure as Code

AWS (Amazon Web Services):

- Practical experience with EC2, S3, RDS, VPC, IAM, Lambda, and CloudWatch
- Proficient in configuring security groups, route tables, and VPNs.
- Experience in elasticity concepts including load balancing and auto-scaling.
- Familiar with AWS IAM policies, role-based access control, and key-based authentication.
- Working knowledge of AWS CloudFormation and Terraform for infrastructure automation.

Microsoft Azure:

- Hands-on with provisioning and managing Windows and Linux VMs.
- Configured VNets, NSGs, Azure Load Balancers, VPN gateways, and ExpressRoute.
- Worked with Azure Storage: Blob, Disk, File, and implemented data redundancy policies.
- Managed Azure Active Directory: SSO, MFA, group policies, user provisioning, and IAM cont

Professional Experience

Aress Software & Education Technologies Pvt Ltd, Nashik

May 2021
–
November 2024

Technical Support Engineer

- Diagnosed and resolved complex technical issues related to web hosting, server configurations, DNS, SSL email systems, and database performance escalated from L1 support.
- Optimized web servers (Apache, Nginx, IIS), databases (MySQL, PostgreSQL), and email systems to enhance performance and stability.
- Took ownership of critical incidents, collaborating with L3 teams or external vendors to resolve issues within defined SLA timelines.
- Monitored resource utilization, and website performance using tools like Nagios, Zabbix
- Led software upgrades, and patch management to ensure compatibility, stability, and security across hosting environments.
- Acted as a technical liaison between customers and internal teams, providing clear, timely updates.
- Handled escalated issues from Tier 1 teams including service outages, performance degradation, access issues, and configuration requests.
- Performed user management, permissions auditing, scheduled backups, system updates, and patch deployments.
- Assisted in maintaining server health through regular monitoring, log analysis, and routine maintenance activities.

New Fold Digital, Mumbai

March 2024
–
August 2025

System Admin Support Specialist

- Investigated and resolved highly complex technical issues escalated from L1 and L2 teams, involving server, network, and application-level problems.
- Resolved high-impact outages and service disruptions in production environments promptly.
- Managed and configured enterprise-level servers (Linux, Windows) and complex IT environments, including high availability clusters and large-scale distributed systems.
- Checked system performance tuning, ensuring optimal resource utilization (CPU, memory, disk I/O, networking) across infrastructure.
- Worked on complex automation scripts using languages such as Bash and PowerShell to automate routine tasks, deployments, and monitoring.
- Configured and managed virtualized environments (VMware, KVM, Hyper-V), ensuring proper resource allocation, security, and performance.
- Lead the implementation of security best practices across the infrastructure, including securing servers, firewalls, VPNs, and databases.
- Developed, implemented, and tested disaster recovery (DR) and business continuity plans to ensure minimal downtime and data loss in case of major failures.
- Ensured that backup systems and data recovery processes are properly configured and operational.
- 10. Lead the response to critical incidents, providing expert-level support and troubleshooting.
- Coordinated and managed escalations, ensuring that issues are addressed promptly and effectively while minimizing service impact.
- Planned and executed large-scale system migrations and upgrades (e.g., OS upgrades, cloud migrations, software patches).
- Ensure minimal disruption to operations during system changes and provide testing and rollback plans in case of problem.
- Documented system architecture, configurations, processes, and troubleshooting procedures to create internal knowledge bases and standard operating procedures (SOPs).
- Trained L1 and L2 team members on advanced technical concepts and troubleshooting techniques.
- Coordinated with vendors and third-party service providers for hardware, software, and cloud service management
- Managed third-party contracts, ensuring service level agreements (SLAs) are met and issues are escalated effectively

IBM, Ahmedabad

–

Present

QRadar Support and Threat Management Engineer

- Provided technical support for IBM QRadar SIEM customers across enterprise environments.
- Troubleshot QRadar issues related to event collection, log source connectivity, DSM parsing, offense generation, and system performance.
- Worked extensively with WinCollect, Syslog, Event Collectors, Event Processors, Flow Processors, and Console deployments.
- Analyzed tcpdump, QRadar logs, ecs-ec-ingress, hostcontext, and event pipeline issues for advanced troubleshooting.
- Assisted customers in integrating security devices, firewalls, Windows servers, Linux systems, and cloud services into QRadar.
- Supported HA deployments, managed services continuity, and incident recovery activities.
- Investigated EPS spikes, storage utilization issues, Ariel query performance, and search optimization.
- Collaborated with SOC teams, network teams, and customer infrastructure teams for issue resolution.
- Provided RCA documentation, troubleshooting recommendations, and best-practice guidance to enterprise customers.
- Worked on threat management workflows, security monitoring use cases, and SIEM operational support.
